Late Orders By Region

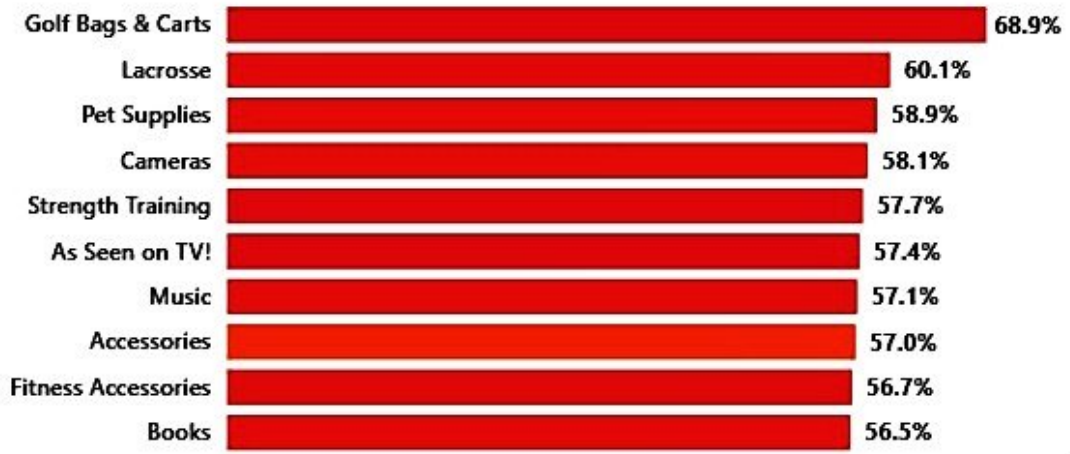

Late Orders By Shipping Mode

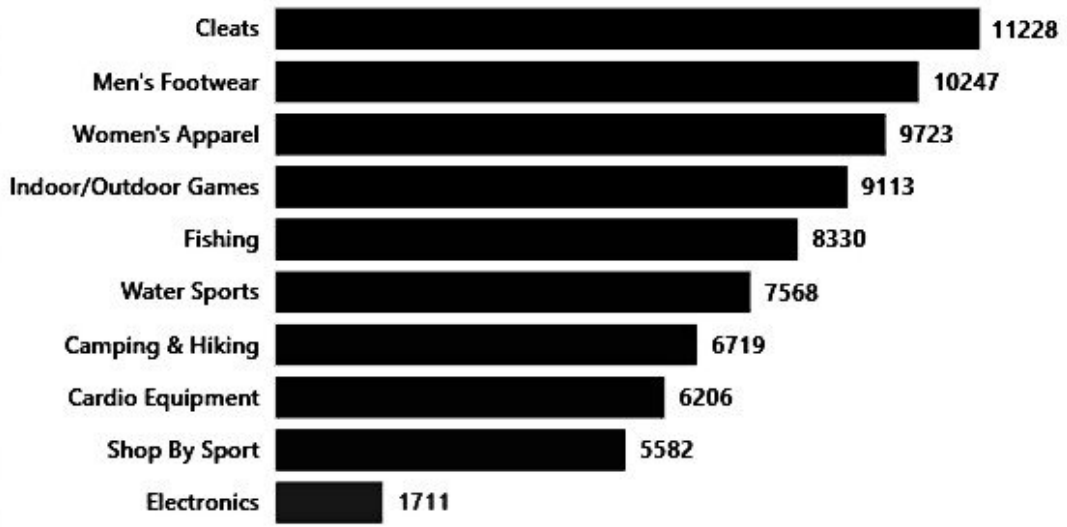

Key Insights : Western Europe records the highest number of late orders, while Standard Class has the highest late-order volume among shipping modes. This suggests that regional delivery conditions and shipping-mode performance should be investigated to identify the major causes of delivery delays.

Product & Shipping Analysis

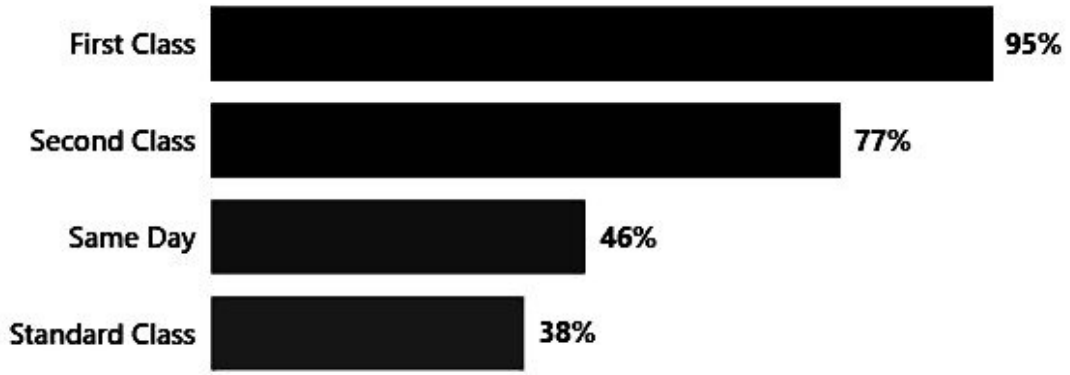

Late Delivery Rate by Product Category

Top 10 Product Categories By Late Orders

Late Delivery Rate By Shipping Mode

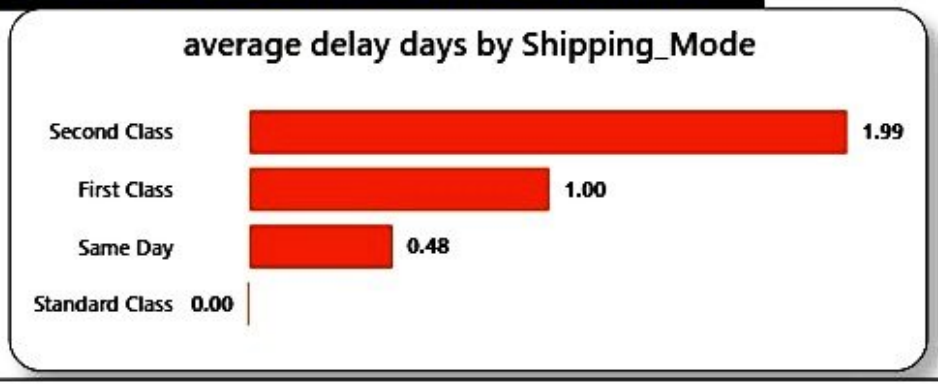

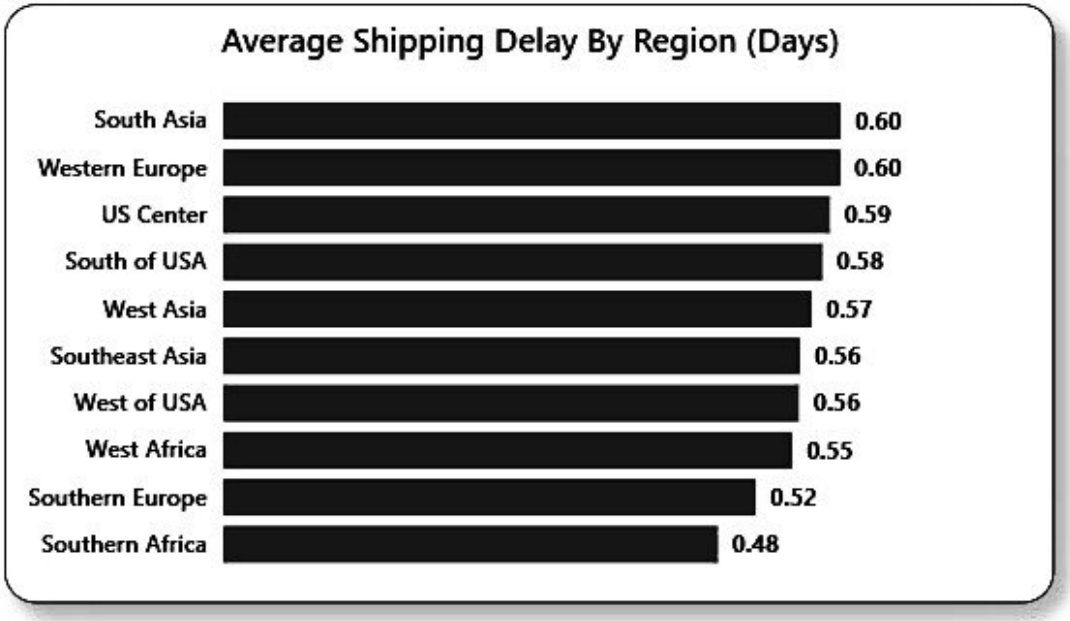

Product Category : Golf Bags & Carts has the highest late delivery rate (68.9%), indicating a potential delivery issue.

Late Orders : Cleats has the highest number of late orders (11,228), followed by Men's Footwear (10,247).

Shipping Mode : First Class has the highest late delivery rate (95%), while Standard Class has the lowest (38%).

Root causes & recommendations

Business Recommendations

1. Shipping Mode Optimization: Investigate Second Class deliveries, which show the highest average delay in the current analysis. Review processing, dispatch, and transit performance before deciding on corrective actions.

2. Regional Performance Improvement: Compare average delay, late-delivery rate, and order volume across regions. Prioritize regions that show consistently weaker performance across these measures.

3. Product Category Monitoring: Review Golf Bags & Carts for its high late-delivery rate and Cleats for its high late-order volume. Investigate potential order-processing and shipping issues.

4. State-Level Investigation: Validate state-level results against order volumes. Avoid prioritizing states with very few orders based only on a 100% late-delivery rate.

5. Performance Tracking: Monitor late-delivery percentage, average shipping delay, and late-order volume over time to evaluate whether corrective actions improve delivery performance.
